1. INTRODUCTION

This Project Closeout Report (the Report) has been prepared in accordance with the requirements of the Contract Specifications for the Time-Critical Removal Action at Area of Concern (AOC) 1, Site 31, Naval Weapons Station Seal Beach Detachment, Concord, California (the Site). Mendelian Construction, Inc. (MCI) was contracted by the United States Navy (Navy) to perform this Removal Action (RA) under Delivery Order (DO) No. 2, Contract No. N68711-01-D-6111. This document has been prepared according to the Construction Specification Section 01100.1.8, Closeout Submittals.

1.1 Site Background

AOC 1 is an undeveloped 17.2-acre site adjacent to Port Chicago Highway (Figure 1). Prior to the Navy's acquisition of the property, the Site was the former location of a nitrogen phosphorous potassium fertilizer plant operated by the Union Oil Company of California from 1955 to 1976. The Navy conducted a preliminary assessment (PA) at the Site in two phases, February 1999 and July 2000. The Preliminary Assessment identified three types of waste material at the Site namely: (a) cinder roadbed material, (b) ash-like material, and (c) waste gypsum. The cinder roadbed material was reportedly contaminated with lead and selenium at concentrations up to 11,400 mg/kg and 875 mg/kg respectively. The ash like material was reportedly contaminated with lead, selenium and mercury at concentrations up to 895, 68.3 and 113 mg/kg respectively.

1.2 Project Objectives and Scope

The results of the environmental investigations indicated that the contaminants in the soil pose an immediate and significant risk to ecological receptors and potential threat to human health. Because the hazardous constituents were near the surface, the Navy made a decision to implement a time-critical RA to protect human health and the environment. The objective of the RA was to remove shallow soil impacted with metals and restore the Site with clean fill that will act as a barrier and eliminate the exposure pathway for the ecological receptors.

The overall scope of the RA involved excavation and removal of contaminated soils from two areas referred to as the Cinder Waste Area and the Hot Spot Area, proper characterization, transport and off-site disposal of the waste material, and restoration of the Site to original condition. The work was performed under the supervision of the Navy Resident Officer In Charge of Construction (ROICC) and in accordance with the Contract Specifications and applicable federal, state and local regulations.

1.3 Report Organization

This report is organized into three sections. Section 2 presents the RA activities and describes the remedial steps in detail. Section 3 presents the waste management activities. In addition, all the documentation from the analytical laboratory and waste disposal facility are included in the appendices.

2. REMOVAL ACTION ACTIVITIES

2.1 Mobilization and Site Setup

Following submittal and approval of the RA Work Plan, the field team mobilized to the Site during the week of June 10, 2002. Site setup activities began on June 17, 2002 and included:

- Baseline documentation of Site conditions involving site walk and photo and video documentation.
- Land survey of Site topography to establish grades.
- Utility survey including contacting Underground Services Alert (USA) and utility location using geophysical equipment.
- Setup of trailer, utilities, and other facilities.
- Setup of decontamination pad, waste stockpile area, and equipment storage area.
- Posting of proper signs.
- Coordination with Contra Costa Water Service regarding access to the pump station located within the Cinder Waste Area.

Figures 2 and 3 present the topographic conditions of the Site prior to start of excavation activities. Appendix A shows photos of some of the Site setup activities.

2.2 Clearing and Grubbing

The Site required significant vegetation clearing and grubbing. The surface of the Site in the areas of concern was cleared of heavy vegetation and the material stockpiled for proper characterization. Field activities were conducted during the week of June 24, 2002.

2.3 Overburden Removal

The Project Specifications called for excavation to depths of two to three feet below ground surface (bgs). The near surface material, however, appeared not to be impacted and the cinder waste material was typically encountered at one-foot bgs. Therefore, as a waste minimization best management practice, MCI proceeded with removal of the overburden soil that did not visually appear impacted with the cinder waste. This material was segregated and placed in stockpiles numbered 1, 2 and 3. Section 3 provides additional information regarding the waste management activities performed during the RA.

2.4 Excavation Activities

2.4.1 Cinder Waste Area

The Cinder Waste Area (CWA) was divided into two areas referred to as Area 1 and 2. Area 1 represented the area to the south of the pump station and included a significant portion of the raised pump station mound. In order to excavate the cinders and the contaminated soils beneath them, the overlying gravel and overburden soil was removed and stockpiled separately. In addition, as specified in the Project Specifications, to protect against potential structural damage to the pump station, the excavation was offset a distance of 10 ft from the edge of the pump station fenceline (representing a theoretical slope of 2 horizontal to 1 vertical ft). Excavation activities in this area were conducted between July 8 and 25, 2002.

Figure 2 presents the limits of excavation boundaries in Area 1 of the CWA. The cinder material was clearly delineated from the surrounding soil given its distinct color and texture. The excavation depths varied from approximately six ft near the pump station to one ft along the property fenceline. The thickness of cinder waste material varied from one to two ft throughout the Site. Excavation continued in the vertical direction one additional foot below the observed cinder waste material. The cinder material horizon that continued under the pump station and the property fenceline was not removed. Approximately 872 bank cubic yards (BCY) of soil and waste were excavated from Area 1.

Area 2 of the CWA represents the area east and north of the pump station. Excavation in this area included conducting a preliminary investigative pot holing to delineate the lateral extent of the cinder waste to the extent practical followed by removal of impacted soil in four compass directions. The final lateral and vertical extent of excavation in Area 2 is shown in Figure 2. Approximately 1,127 BCY of soil and waste were excavated from Area 2.

During excavation activities in the Area 2, two pieces of concrete pipe, approximately 24- to 36-inch in diameter were discovered. The top of the pipes was approximately two ft bgs and the pipes were in a vertical orientation. The piping was not removed from the Site.

2.4.2 Hot Spot Area

The Navy contractor, Tetra Tech, EMI (TtEMI), conducted additional investigation sampling in the vicinity of the Hot Spot Area (HSA) to delineate the lateral extent of the contaminated soil. The HSA is located in the north-eastern portion of the Site. In September 2002, removal activities began in the HSA. On September 20, a total of 148 BCY of soil were removed from the portion of the HSA referred to as Excavation-C8 (Figure 3). Between September 24 and 25, 44 BCY of soil were removed from the more southern portion of the HSA, Excavation-J18. A total of 5 grids, each measuring 25 by 25 ft were excavated to a depth of 2 ft bgs.

2.5 Confirmation Sampling

At the conclusion of removal activities in each area, the Navy contractor, TtEMI, collected soil confirmation samples from the floor and sidewalls of the excavations. The locations of the confirmation samples are shown in Figures 2 and 3 for the CWA and HSA, respectively. The results of the sampling are provided in a separate report prepared by TtEMI.

2.6 Backfill and Compaction

Upon completion of excavation activities and collection of confirmation samples by TtEMI, the Navy gave approval for backfilling the excavations. The excavation backfill and compaction activities included identification, testing, and import of acceptable fill material, post-excavation land survey, placement and compaction of import fill, and grading the area. Each activity is discussed in more detail below.

2.6.1 Import Fill Testing

As the first task in preparation for backfill and compaction, MCI began searching for an acceptable source of three types of fill material including a structural backfill, top soil and an aggregate base. The fill material had to meet the chemical and physical characteristics and requirements specified in the Project Contract Specifications. Following several iterations of locating potential sources of fill and testing each source, an acceptable source of each fill was identified. The analytical results of the final acceptable fill source are summarized in Table 1. The laboratory analytical results are provided in Appendix B.

Once the Navy accepted the source of the fill, the material was trucked to the Site and stockpiled at a designated location near the excavation area.

2.6.2 Post-Excavation Survey

Prior to placement of the import fill material, the lateral and vertical extent of the excavations were surveyed. Figures 2 and 3 present the final limits of the excavation performed at the Site.

2.6.3 Backfill and Compaction

Backfilling involved placement of structural fill in 8-inch loose lifts and compacting the soil with a sheepsfoot roller. Following compaction of each lift, the in-place density was measured using a nuclear gauge. The minimum compaction requirement of 90% for the structural fill was easily achieved across the Site. The compaction test results for the project are presented in Appendix C. The top one foot of the backfill consisted of top soil. The material was compacted to 85% of the maximum dry density. In addition, the pump station mound was restored to the original grade with

the top foot of the backfill consisting of aggregate base. Compaction curves, test results, and other geotechnical testing for all import fill material is presented in Appendix C.

2.7 Grading

The surface of the excavated areas was graded to match, as closely as possible, the original grade (prior to excavation). Final grades were established so that stormwater would runoff away from the excavated areas and therefore minimize ponding and infiltration. Figure 4 presents the final grades at the Site.

2.8 Site Restoration

As per the Project Specifications, the areas of concern were revegetated and restored at the conclusion of the project. Revegetation included planting 20 Kayote Bush and hydroseeding the Site.

The Kayote bush were planted in a straight row, from about 30 feet east of the west edge of the pump station running north through Area 1 in the CWA. The purpose behind this design was to recreate the wind break that existed in this area prior to clearing and grubbing. The bushes were spaced three ft on center. In order to irrigate these plants, a drip system was established. The source of water for the drip system was a line running from an eye wash station located near the pump station and owned by the Contra Costa Water District. A valve actuator was installed in the line and a timer, operated by a photocell, was installed on the valve actuator to provide proper watering frequency.

The hydroseed design included a mixture of native grasses, mulch and binder. The mix was applied at a rate of 100 pounds of pure live seed per acre and included the following grasses:

- Bromus carinatus 30 Lbs
- Elymus triticoides 20 Lbs
- Hordeum brachyantherum 20 Lbs
- Stipa pulchr 18 Lbs
- California brome 12 Lbs

In addition to the grasses, the mix included sterile straw mulch (2,000 lbs/acre) and a binder of guar natural organic tackifier (120 lbs/acre).

MCI monitored the planted areas for the occurrence of non-native invasive weeds. Such weeds were not encountered on the Site so no herbicides were used.

3. WASTE MANAGEMENT

Waste management activities at the Site included segregation of overburden soil, stockpiling of contaminated soils, waste characterization sampling, waste profiling, and loading and transportation of the waste to appropriate disposal facilities. These activities are described for each type of waste stream encountered at the Site. Appendix D presents the analytical results of the waste characterization sampling performed during the IRA. In addition, the waste classifications are presented for each type of waste stream in Table 2.

3.1 Overburden Soil

The overburden soil as well as the clear and grub material were segregated and placed in designated stockpile cells that were constructed of hay bales and visqueen. The overburden soil and clear and grub waste were placed in three stockpiles that were referred to as Stockpile No. 1, 2 and 3. The estimated volume of the pile was 1,421 CYs. One four-point composite soil sample was collected from approximately 250-CY pile sections and analyzed for the contaminants of concern. Discussions with the landfill facility indicated that the analytical suite of interest included:

- CAM 17 priority pollutant metals;
- Hydrocarbons including BTEX and TPH as gasoline, diesel and motor oil; and,
- Moisture.

3.2 Contaminated Soil

Contaminated soil excavated from Areas 1 and 2 within the CWA and HSA were placed in stockpiles of approximately 250 to 300-CY capacity. Each stockpile was then sampled using a random-generated four-point composite sample and analyzed for the following parameters as required by the landfill:

- CAM 17 priority pollutant metals;
- Hydrocarbons including BTEX and TPH as gasoline, diesel and motor oil;
- Moisture; and,
- Corrosivity, Ignitability, and Reactivity.

Based on the analytical results of the initial sampling, additional tests were performed to determine if the soil was Resource Conservation and Recovery Act (RCRA) hazardous or only California hazardous waste. The determination was made based on metals results. For example, if a sample's total lead results exceeded the respective lead Total Threshold Limit Concentration (TTLC), then the soil was considered a California hazardous waste. If the results of that sample also indicated that it may fail the lead Toxicity Characteristic Leaching Procedure (TCLP) results, based on a rule-of-thumb 20 times the TCLP versus total results, then the sample would be analyzed for lead by the TCLP method.

There was a total of approximately 3,644 tons of soil and waste removed from the Site. About 25% (917 tons) of the soil was classified as Class 2, or non-hazardous, waste. Thirty-three percent (1,205 tons) was classified as non-RCRA Class 1 waste and the remaining 42% (1,522 tons) was Class 1 RCRA hazardous waste.

Weiss Associates 5801 Christie Ave., Ste. # 600 Emeryville CA, 94608	Project: No Project Project Number: Concord Naval Weapons Station Project Manager: Alborz Wozniak	**Reported:** 12-Aug-02 14:09

Notes and Definitions

I-08	The LCS recovery for this analyte was above the control limit by 22%. This should be considered in evaluating the results for this batch for their intended purpose.
I-08a	The LCS recovery for this analyte was above the control limit by 6%. This should be considered in evaluating the results for this batch for their intended purpose.
I-08b	The LCS recovery for this analyte was above the control limit by 9%. This should be considered in evaluating the results for this batch for their intended purpose.
O-10	The result was reported with a possible low bias due to the continuing calibration verification falling outside the acceptance criteria.
QB-01	The method blank contains this analyte at a concentration above the reporting limit; however, the concentration is less than 5% of the sample result, which is negligible according to method criteria.
QM-06	Due to noted non-homogeneity of the QC sample matrix, the MS/MSD did not provide reliable results for accuracy and precision. Sample results for the QC batch were accepted based on LCS/LCSD percent recoveries and RPD values.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

C-01	To reduce matrix interference, the sample extract has undergone sulfuric acid clean-up, method 3665, which is specific to hydrocarbon contamination.
C-06	To reduce matrix interference, the sample extract has undergone TBA (sulfur) clean-up, method 3660B.
Q-LIM	The percent recovery was outside of the control limits. The samples results may still be useful for their intended purpose.
Q-LIMa	The percent recovery was outside of the control limits. The samples results may still be useful for their intended purpose.
QR-07	The RPD was outside control limits. The results may still be useful for their intended purpose.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Notes and Definitions

F-01	No flash detected up to 60 °C
HC-12	Hydrocarbon pattern is present in the requested fuel quantitation range but does not resemble the pattern of the requested fuel.
HC-14	A hydrocarbon pattern is present in the requested fuel quantitation range but it does not resemble the pattern of the requested fuel. The pattern more closely resembles that of a heavier hydrocarbon mix.
QM-07	The spike recovery was outside control limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
S-02	The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Weiss Associates	Project: No Project	
5801 Christie Ave., Ste. # 600	Project Number: Concord Naval Weapons Station	**Reported:**
Emeryville CA, 94608	Project Manager: Alborz Wozniak	18-Jul-02 16:00

Notes and Definitions

F-01	No flash detected up to 60 °C
HC-12	Hydrocarbon pattern is present in the requested fuel quantitation range but does not resemble the pattern of the requested fuel.
Q-LIM	The percent recovery was outside of the control limits. The samples results may still be useful for their intended purpose.
QM-07	The spike recovery was outside control limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QM-4X	The spike recovery was outside of control limits for the MS and/or MSD due to analyte concentration at 4 times or greater the spike concentration. The QC batch was accepted based on LCS and/or LCSD recoveries within the acceptance limits.
QR-07	The RPD was outside control limits. The results may still be useful for their intended purpose.
S-02	The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.
S-06	The recovery of this surrogate is outside control limits due to sample dilution which was required by high analyte concentration in the sample and/or matrix interference.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

F-01	No flash detected up to 60 °C
HC-12	Hydrocarbon pattern is present in the requested fuel quantitation range but does not resemble the pattern of the requested fuel.
Q-LIM	The percent recovery was outside of the control limits. The samples results may still be useful for their intended purpose.
QM-07	The spike recovery was outside control limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
QM-4X	The spike recovery was outside of control limits for the MS and/or MSD due to analyte concentration at 4 times or greater the spike concentration. The QC batch was accepted based on LCS and/or LCSD recoveries within the acceptance limits.
QR-07	The RPD was outside control limits. The results may still be useful for their intended purpose.
S-02	The surrogate recovery for this sample cannot be accurately quantified due to interference from coeluting organic compounds present in the sample extract.
S-06	The recovery of this surrogate is outside control limits due to sample dilution which was required by high analyte concentration in the sample and/or matrix interference.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

HC-12	Hydrocarbon pattern is present in the requested fuel quantitation range but does not resemble the pattern of the requested fuel.
QM-07	The spike recovery was outside control limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
S-04	The surrogate recovery for this sample is outside control limits due to interference from the sample matrix.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Notes and Definitions

QM-07	The spike recovery was outside control limits for the MS and or MSD. The batch was accepted based on acceptable LCS recovery.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Notes and Definitions

QM-07	The spike recovery was outside control limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Notes and Definitions

QR-02	The RPD result exceeded the control limits; however, both percent recoveries were acceptable. Sample results for the QC batch were accepted based on percent recoveries and completeness of QC data.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. Unless otherwise stated, results are reported on a wet weight basis. This analytical report must be reproduced in its entirety.

Mercury	0.510	0.0050	mg/kg	0.667	0.79	NR	75-125			QM-07
Matrix Spike Dup (2I30014-MSD1)		Source: MLI0684-01		Prepared & Analyzed: 09/30/02						
Mercury	0.521	0.0050	mg/kg	0.667	0.79	NR	75-125	2.13	20	QM-07

The results in this report apply to the samples analyzed in accordance with the chain of custody document. Unless otherwise stated, results are reported on a wet weight basis. This analytical report must be reproduced in its entirety

Notes and Definitions

QM-07	The spike recovery was outside control limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

KHF SUBPART CC QUESTIONNAIRE

Generator: Naval Weapons Station Seal Beach, Detachment Concord

RCRA Code(s): D008

Profile #: EB1919

Process X Stabilization

____ Encapsulation

Please answer questions 1 and 2 below. Your Customer Service Representative will contact you if there are any changes in waste disposition and pricing information. Thank you for your time and effort in this matter.

Please sign and fax the questionnaire back to us at (559) 386-6109, Attention: Edward Vasquez

(1) Does your waste stream contain underlying hazardous constituents exceeding the Universal Treatment Standards (UTS)? (RE: 40 CFR 268.48 UTS Table) See attached CWM-2004 F039/Underlying Hazardous Constituents (UTS) form.
stituents that are referenced by the above RCRA codes are NOT considered Underlying Hazardous Constituents)

____ NO

X YES **If yes, please mark an "X" next to the applicable constituents on the CWM-2004 UTS Form, indicating concentration.**

____ Constituents are organic

X Constituents are inorganic

(2) Does your waste stream contain total volatile organics? Provide available analysis (if any).

X None ____ <500ppm ____ > 500 ppm

I hereby certify that the above information is true and accurate and any changes to the information provided will be disclosed to the CWM-Kettleman Hills Facility prior to shipment. If this certification is made by a broker, the undersigned signs as authorized agent of the generator and has confirmed the information contained in this Subpart CC form from information provided by the generator and additional information as it has determined to be reasonably necessary.

GENERAL INFORMATION

1. GENERATOR NAME Naval Weapons Station Seal Beach, Detachment Concord Generator USEPA ID: CA7170024528
2. Generator Address 10 Delta Street, Concord, CA 94520-5100 Billing Address: [ ] Same: DenBeste Transportation, Inc. 7705 Conde Lane, Windsor, CA 95492
3. Technical Contact/Phone Rudy Pontemayor / 925-146-5872
4. Alternate Contact/Phone Amado Andal / 925-246-5657 Billing Contact/Phone Lori DenBeste / 707-838-1407

PROPERTIES AND COMPOSITION

5. A. Process Generating Waste: Removal of Old Road Base
   B. Is the waste from a CERCLA or state mandated cleanup? Yes [X] No [ ] Location Name: Site 31, Port Chicago Hwy, CNWS
6. Waste Name: Soil contaminated with lead
7. A. Is this a USEPA hazardous waste (40 CFR Part 261)? Yes [X] No [ ]
   B. If D001, D002, D003, D004-D043 do any underlying hazardous constituents (UHC's) apply? Yes [ ] No [X] (If yes, attach UHC form)
   C. Does this waste contain debris (List size and type in chemical composition)? Yes [ ] No [X]
   D. Identify ALL USEPA listed and characteristic waste code numbers (D, F, K, P, U): D008
   State Waste Codes: 611
   E. Does this waste contain any Class I or Class II ozone depleting substances? Yes [ ] (List in chemical composition) No [X]
8. Physical state @ 70°F: A. Solid [X] Liquid [ ] Both [ ] Gas [ ] B. Single Layer [X] Mulitlayer [ ] C. Free liquid range 0 to 0%
9. A. pH Range to or Not Applicable [X] B. Strong Odor [ ] describe None C. Color Varies
10. Liquid Flash Point: < 73°F [ ] 73-99°F [ ] 100-139°F [ ] 140-199°F [ ] > 200°F [ ] N.A. [X]
11. CHEMICAL COMPOSITION: List ALL constituents (including halogenated organics and UHC's) present in any concentration and forward available analysis.

Constituents	Range	Units	Constituents	Range	Units
Soil	70-99	%			
Cinder Material	10-30	%			
Paper, Plastic, Wood, PPE	0-1	%			

TOTAL COMPOSITION MUST EQUAL OR EXCEED 100%

12. OTHER PCB's: if yes, concentration (dry weight) N/A ppm, PCB's regulated by 40 CFR 761 [ ] Pyrophoric [ ] Explosive [ ] Radioactive [ ]
    Water Reactive [ ] Shock Sensitive [ ] Oxidizer [ ] Carcinogen [ ] Infectious [ ] Other Not Applicable
13. If Benzene, concentration N/A ppm. Is the waste subject to the Benzene Waste Operation NESHAP? Yes [ ] No [X] Unknown [ ]
14. Is the waste subject to RCRA Subpart CC controls? Yes [ ] No [X] Volatile organic concentration, if known N/A ppmw.
15. If the waste us subject to the land ban and meets the treatment standards, check here: _____ and supply analytical results.

SHIPPING INFORMATION

16. PACKAGING: Bulk Solid [X] Type/Size: End Dump Bulk Liquid [ ] Type/Size: _____ Drum [ ] Type/Size: _____ Other _____
17. SHIPPING FREQUENCY: Units 400 cu.yds. Per: [ ] Month [ ] Qtr. [ ] Year [X] One Time [ ] Other _____

SAMPLING INFORMATION

18. A. Sample source (drum, lagoon, pond, tank, vat, etc.) See Attached Analytical
    Date Sampled: _____ Sampler's Name/Company: _____
    B. Generator's Agent Supervision Sampling _____ 19. [ ] No sample required (see instructions)

GENERATOR'S CERTIFICATION

I hereby certify that all information submitted in this and all attached documents contains true and accurate descriptions of this waste. Any sample submitted is representative as defined in 40 CFR 261 - Appendix 1 or by using an equivalent method. All relevant information regarding known or suspected hazards in the possession of the generator has been disclosed. I authorize CWM to obtain a sample from any waste shipment for purposes of recertification. If this certification is made by a broker, the undersigned signs as authorized agent of the generator and has confirmed the information contained in the Profile Sheet from information provided by the generator and additional information as it has determined to be reasonably necessary.

F039/UNDERLYING HAZARDOUS CONSTITUENT FORM (UTS)

Generator Name: Naval Weapons Station Seal Beach, Detachment Concord

Manifest Doc. No.:

CWM Profile Number: EB1919

State Manifest No.:

If characteristic waste requires treatment for underlying hazardous constituents present in the waste at the point of generation, and at a level above the UTS constituent specific treatment standard then it must be listed. Write the letter (A, B1, B3, or C which corresponds to the letter on form CWM-2005A) beside each constituent present, to properly describe how the constituent(s) must be managed under 40 CFR 268.7.

[1] These concentrations are expressed in mg/l and are measured through analysis of TCLP extract, all others measured through total waste analysis.

[2] These constituents are only applicable as Underlying Hazardous Constituents. They are not constituents requiring treatment of F039 wastes.

[3] Vanadium is not an Underlying Hazardous Constituent requiring treatment in D001-D003, or D012-D043 wastes.

[4] These compounds are regulated by the sum of their concentration instead of as individual constituents.

KHF SUBPART CC QUESTIONNAIRE

Generator: Naval Weapons Station Seal Beach, Detachment Concord

RCRA Code(s): D008

Profile #: EB1917

Process X Stabilization

_____ Encapsulation

Please answer questions 1 and 2 below. Your Customer Service Representative will contact you if there are any changes in waste disposition and pricing information. Thank you for your time and effort in this matter.

Please sign and fax the questionnaire back to us at (559) 386-6109, Attention: Edward Vasquez

(1) Does your waste stream contain underlying hazardous constituents exceeding the Universal Treatment Standards (UTS)? 40 CFR 268.48 UTS Table) See attached CWM-2004 F039/Underlying Hazardous Constituents (UTS) form.
.stituents that are referenced by the above RCRA codes are NOT considered Underlying Hazardous Constituents)

X NO

_____ YES **If yes, please mark an "X" next to the applicable constituents on the CWM-2004 UTS Form, indicating concentration.**

_____ Constituents are organic

_____ Constituents are inorganic

(2) Does your waste stream contain total volatile organics? Provide available analysis (if any).

X None _____ <500ppm _____ > 500 ppm

I hereby certify that the above information is true and accurate and any changes to the information provided will be disclosed to the CWM-Kettleman Hills Facility prior to shipment. If this certification is made by a broker, the undersigned signs as authorized agent of the generator and has confirmed the information contained in this Subpart CC form from information provided by the generator and additional information as it has determined to be reasonably necessary.

WASTE MANAGEMENT

CUSTOMER:

DEPUTY WEIGHMASTER: Donofrio, Frank DEPUTY WEIGHMASTER: Donofrio, Frank

W E I G H M A S T E R C E R T I F I C A T E

THIS IS TO CERTIFY that the following described commodity was weighed, measured, or counted by a weighmaster whose signature is on this certificate, who is recognized authority of accuracy, as prescribed by Chapter 7 (commencing with Section 12700) of Division 5 of the California Business and Professions Code administered by the Division of Measurements Standards of the California Department of Food and Agriculture.

TERMS AND CONDITIONS

1. **ACCEPTABLE WASTE**. Customer shall deliver and Company shall accept for disposal or other management purpose only Acceptable Waste. As used herein, "Customer" shall mean both Customer and Generator listed on the reverse hereof. Customer shall deliver the full quantity of Acceptable Waste generated and/or handled by Customer as estimated on the reverse hereof. Acceptable Waste means and includes only such waste as is described on the reverse an which is approved and permitted for management at the Designated Facility listed on the reverse, and shall not include any Nonconforming Waste. As use herein, Nonconforming Waste means waste that: (a) is not in conformance with the description and/or estimated quantity of the waste set forth on the reverse; (b) is or contains any infectious waste, or radioactive, volatile, corrosive, highly flammable, explosive, biomedical, biohazardous material or hazardous, dangerous, or toxic substances, as defined pursuant to or listed or regulated under applicable federal, state or local law, except as stated on the reverse; or (c) is prohibited from being received, managed or disposed of at the Designated Facility by federal, state or local law, regulation, rule, code, ordinance, order, permit or permit condition;

2. **REPRESENTATIONS & WARRANTIES**. Customer represents and warrants that: (a) the description of the waste set forth on the reverse hereof is true and correct in all material respects; (b) all waste delivered to the Designated Facility by Customer shall be Acceptable Waste as defined above and shall not be or contain Nonconforming Waste; (c) Customer shall, and shall cause any carrier with which it contracts to, handle and transport the waste in a safe and workmanlike manner in full compliance with all applicable federal, state and local laws, ordinances, decisions, orders, rules or regulations; and (d) Customer has advised its drivers of Company's prohibition on delivery of Nonconforming Waste, of the definitions and listing of hazardous waste and hazardous substances under applicable federal and state law and regulations and of the definition of Acceptable Waste herein. Company represents and warrants that it shall manage the Acceptable Waste in a safe and workmanlike manner in full compliance with all applicable federal, state and local laws, ordinances, decisions, orders, rules or regulations.

3. **WASTE REJECTION**. Company may inspect, analyze or test any waste delivered by Customer and/or may reject, refuse or revoke acceptance of any waste if, in the opinion of Company, the waste or tender of delivery fails to conform to or Customer fails to comply with the terms of this Agreement, including by delivery of Nonconforming Waste. Company may also reject any waste which (a) Company reasonably believes would, as a result of or upon disposal or other management, be a violation of local, state or federal law, regulation, ordinance or permits, including land use restrictions or conditions applicable to the Designated Facility; or (b) in Company's opinion would present a significant risk to human health or the environment, cause a nuisance or otherwise create or expose Company or Customer to potential liability. Company also shall have the right to refuse to accept or to reject any Acceptable Waste in the event of Customer's failure to pay fees owed by Customer hereunder. In the event Company rejects or revokes acceptance of waste hereunder, Customer shall, at its sole cost, immediately remove or arrange to have the rejected waste removed from Company's control or property. Customer shall pay and/or reimburse Company for any and all costs, damages and/or fines incurred as a result of or relating to Customer's tender or delivery of Nonconforming Waste or other failure to comply or conform to this Agreement, including costs of inspection, testing and analysis.

4. **SPECIAL HANDLING; TITLE**. If Company elects, in its sole discretion, to handle, rather than reject, Nonconforming Waste, Company shall have the right to manage such Nonconforming Waste in the manner deemed most appropriate by Company given the characteristics of the Nonconforming Waste. Company may assess and Customer shall pay additional fees associated with delivery of Nonconforming Waste, including, but not limited to, special handling or disposal charges, and costs associated with different quantities of waste, different delivery dates, modifications in operations, specialized equipment, and other operational, environmental, health, safety or regulatory requirements. Title to and ownership of Acceptable Waste shall transfer to Company upon its final acceptance of Acceptable Waste. Title to, ownership of and liability for Nonconforming Waste shall at all times remain with Customer. Revocation of acceptance by Company shall operate to re-vest all incidents of ownership in Customer.

5. **INDEMNITY**. Each party hereto (the "Indemnitor") hereby agrees to indemnify, hold harmless and defend the other party, and its owners, officers, directors, employees and agents (collectively, the "Indemnitees"), from and against any and all liabilities, penalties, fines, forfeitures, fees, demands, claims, causes of action, suits, judgments and costs and expenses incidental thereto, including attorneys' fees (collectively, "Damages"), which any or all of the Indemnitees may hereafter suffer, incur, be responsible for or pay out, including for personal injuries, property damage, or contamination of or adverse effects on the environment, tr the extent caused by, or arising from or in connection with the breach of any representations or warranties of the Indemnitor set forth in this Agreement, or an negligent actions or omissions or willful misconduct of the Indemnitor, its employees, officers, owners, directors or agents, or the violation of any law, ordinance or regulation, including, without limitation, the Comprehensive Environmental Response, Compensation and Liability Act, 42 U.S.C. § 9601 et seq., as amended. Such indemnity shall exclude Damages to the extent they arise as a result of any negligent actions or omissions or willful misconduct of the Indemnitees or their employees, officers, owners, directors or agents. The indemnification obligation hereunder shall arise only in excess of any available and collectible insurance proceeds and the Indemnitor shall be liable hereunder to pay only its share of the amount of Damages, if any, that exceeds the total amount that all insurance has paid for the Damages, plus the total of all deductible and self-insured expenses paid under all insurance policies. The obligations in this Section 5 shall survive the performance and termination of this Agreement.

6. **UNCONTROLLABLE CIRCUMSTANCES; TERMINATION**. Except for the obligation to pay fees hereunder, the performance of this Agreement may be discontinued or temporarily suspended by either party, and neither party shall be deemed to be in breach of this Agreement, in the event performance is prevented by a cause or causes beyond the reasonable control of the affected party. Such causes shall include, but not be limited to, acts of God, acts of war, riot, fire, explosion, accident, flood or sabotage, governmental laws (including nuisance), permit conditions, regulations, restrictions (including land use), condition of the waste, injunction or actions or omissions of third party transporters or other contractors, suppliers or vendors. Company may immediately terminate management services hereunder upon written notice to Customer in the event Customer breaches any term, provision or obligation under this Agreement, in which case, Customer shall be liable for and shall pay to Company all costs and losses incurred by Company as a result of or relating to any such termination.

7. **MISCELLANEOUS**. This Agreement shall be governed by the laws of the state in which the Designated Facility is located. Every provision of this Agreement shall be severable. This Agreement represents the entire understanding and Agreement between the parties relating to the management of waste, except that, if the parties, or their parent companies, are parties to a national service agreement, the terms of such national service agreement shall govern over any inconsistent terms in this Agreement. No representations, statements or Agreements, unless agreed to by the parties in writing, shall modify, change, amend or otherwise affect the obligations undertaken in this Agreement. No waiver by either party of any one or more defaults or breaches by the other in the performance of this Agreement shall operate or be construed as a waiver of any future defaults or breaches. Customer may not assign this Agreement without the prior written consent of Company. This Agreement shall be binding upon and shall inure to the benefit of the parties' successors and assigns.

THIS IS A LEGALLY BINDING CONTRACT. EACH UNDERSIGNED INDIVIDUAL ACKNOWLEDGES THAT HE/SHE HAS READ AND UNDERSTANDS THE TERMS AND CONDITIONS OF THIS AGREEMENT SET FORTH ABOVE AND ON THE REVERSE HEREOF AND THAT HE/SHE HAS THE AUTHORITY TO SIGN ON BEHALF OF CUSTOMER/GENERATOR AND COMPANY. BY SIGNING BELOW, CUSTOMER AND GENERATOR INDICATE A FIRST HAND KNOWLEDGE OF THE WASTE'S CHARACTERISTICS AND CERTIFY THE TRUTH OF THE INFORMATION ON THE REVERSE HEREOF. AGREED TO AS OF THE DATES BELOW.

16. GENERATOR'S CERTIFICATION: I hereby declare that the contents of this consignment are fully and accurately described above by proper shipping name and are classified, packed, marked, and labeled, and are in all respects in proper condition for transport by highway according to applicable international and national government regulations.

If I am a large quantity generator, I certify that I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment; OR, if I am a small quantity generator, I have made a good faith effort to minimize my waste generation and select the best waste management method that is available to me and that I can afford.

Port Chicago Hwy, [illegible]

16. GENERATOR'S CERTIFICATION: I hereby declare that the contents of this consignment are fully and accurately described above by proper shipping name and are classified, packed, marked, and labeled, and are in all respects in proper condition for transport by highway according to applicable international and national government regulations.

If I am a large quantity generator, I certify that I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment; OR, if I am a small quantity generator, I have made a good faith effort to minimize my waste generation and select the best waste management method that is available to me and that I can afford.
